Explanation of results:

NORMAL: This dog has tested clear for the mutation causing PDP1 in this breed. It can only transmit a normal gene to offspring, and can be bred to a dog with any test result without producing affected offspring.

CARRIER: This dog has tested as a carrier for the mutation causing PDP1 in this breed. It will not develop the disease, but it may transmit either a normal gene or an affected gene to offspring. To avoid producing affected offspring this dog should only be bred to dogs DNA-tested NORMAL for this mutation.

AFFECTED: This dog has tested as affected for the mutation causing PDP1 in this breed. Affected dogs will have dramatic exercise intolerance and probable shortened lifespan due to cardiac and respiratory complications. Using this dog for breeding is not recommended.
